

Cyber Awareness Platform

Cyber Awareness Platform

Our partner software educates its users about the cyber risks that they may face in their work and home environment, by increasing their awareness on how to avoid and combat these risks. By doing so, it informs and engages staff on the changing threat landscapes and provides contextual updates and implications. The platform quantifies, visualises and demonstrably reduces the levels of a cyber risk that an organisation carries across its employee base.

Xoserve's award-winning AI-Driven unified cybersecurity awareness platform goes above and beyond the everyday traditional 'Tick-Box' method of approach to security awareness training. By utilising the cloud-based SaaS cyber platform, advanced data analytics and cognitive technologies help with cybersecurity awareness, behaviour and culture.

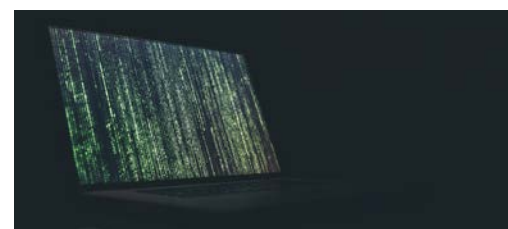

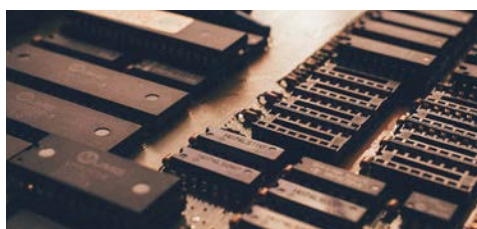

The platform blends GCHQ and IISP accredited content, advanced analytics, psychology and behavioural science to measure, understand and report on awareness, behaviour and culture. It is designed to demonstrably reduce human, cyber and data protection risk.

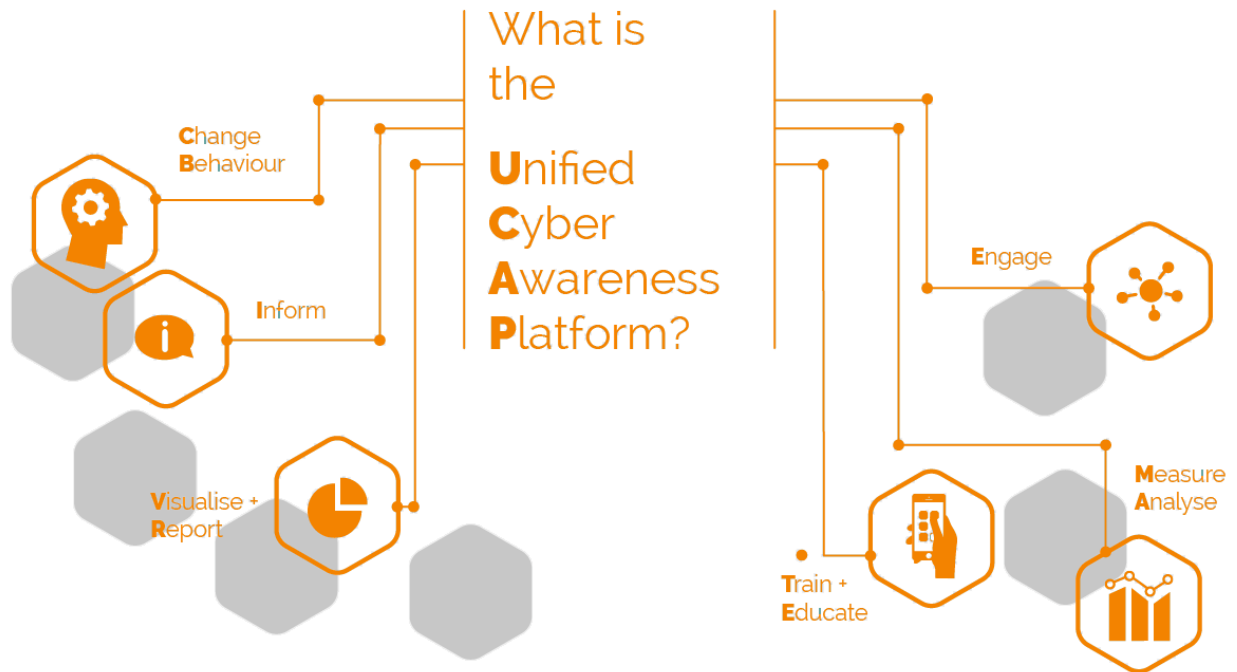

Features:

- GCHQ & IISP Accredited training material developed by former UK Government specialists
- Machine learning technology customises content for user putting security into context
- Advanced proprietary analytics measure user awareness, behaviour and culture
- All content is continually updated and improved throughout the license period
- Ongoing and adaptive user testing ensures retention of learned knowledge
- Supply chain assurance tool allows oversight of supply chain human cyber risk
- Fully customisable content to reflect organisational policy and procedure
- Integrated simulated attack tools include phishing, smishing and USB drops

Benefits

- Human-centric design empowers users to contribute and engage with security
- Demonstrably reduces human-cyber risk including phishing click rates
- Demonstrably increases user engagement, communication and improves attitude
- Plug and play design requires no input from admins after initial setup
- Allows complete oversight of an organisations cyber awareness, behaviour and culture
- Administrator dashboard allows comprehensive reporting for easy demonstration of compliance
- See genuine change in organisational security training
- Learning content accessible remotely, at any time, reducing user downtime
- Completion will comprehensively support compliance with GDPR and NIS Directive

Change Behaviour

- Psychology & Behaviour Change Theory
- Multi-vector Simulated Attacks

Inform

- Notifications & Alerts

Visualise + Report

- Supply Chain Awareness
- CMS/GRC Integration
- Automated Reports
- Sentiment & Culture

Engage

- User Insights
- Interactive

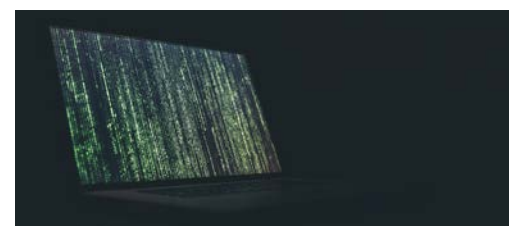

Train + Educate

- Intelligent e-learning
- Interactive Content
- Advanced tech: deeper learning/machine learning
- GCHQ/IISP

Measure + Analyse

- Analytics
- Baseline
- Compare

Learning Content

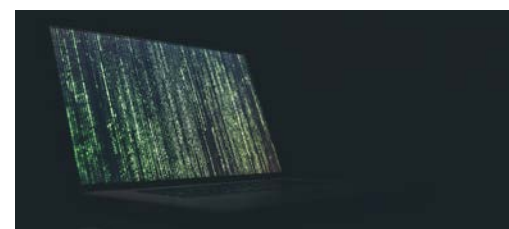

Core Modules

CybSafe's core modules have been designed to provide users with all the tools and information they need to ensure they are able to protect themselves, their organisations and their families from cybercrime.

All core modules have been accredited under the GCHQ Certified Training (GCT) scheme and by the Institute of Information Security Professionals (IISP). Both schemes provide a benchmark for cyber security training by assuring the quality of both content and its delivery. CybSafe is independently verified through this process annually. Completion of the core modules will demonstrably support compliance with regulations such as the GDPR and the NIS Directive.

Additionally, all content and features go through extensive internal and external QA testing, which includes user testing conducted under the supervision of in-house psychologists, to ensure it's delivered in the most effective way possible.

Core Modules	Description
What is CybSafe?	This module serves as a short introduction to the platform, methodologies, and how users can get the most from their CybSafe experience.
Am I Really a Target?	This module shows users how to identify the different types of criminals who frequent and use the internet and asks the user to consider why they might be a valuable target for criminals.
Passphrases	Users are taught a method for creating strong passphrases. The method has been developed in conjunction with psychologists so that users are able to create passphrases which are easily remembered but difficult for criminals to defeat.
Preventing Identity Theft	Users are shown how simple it is to steal an identity. They are then provided the tools necessary to ensure neither they, their families or colleagues within their organisation become victims.
Public Wi-Fi	This module teaches users to recognise if a Wi-Fi hotspot is unsafe and shows them the benefits of using Wi-Fi securely.
Browsing Securely	Users are shown how to identify unsafe websites quickly, accurately and consistently, stop websites from tracking them, disable internet adverts and boost their download speeds.
Device Security	This module teaches users how to setup and use computers and other internet connected devices securely.
Malware & Breach Recovery	Users are shown how to spot the signs of a malware infection, including ransomware. They are taught how to prevent infections and how to help friends and family members should one of their devices become infected. It also informs what should be done if a breach is discovered.
Social Engineering	Users are taught how criminals conduct social engineering attacks by exploiting human traits, such as curiosity, courteousness, gullibility, greed and trust. They are taught how to detect and correctly respond to attacks to increase organisational security.
GDPR & Your Rights	This module introduces users to the sections of GDPR likely to have an affect on them. They are provided the information needed to ensure neither they or their organisation falls foul of the new regulations.

Role-Specific Modules

Role specific modules are provided on all CybSafe Pro and Custom licenses at no extra cost. These modules put cyber security into greater context for users by relating specific examples to their chosen profession.

Other Modules

The platform is being continuously updated with exciting and engaging new content. We currently offer the following additional modules and we expect to add to this list in the near future.

Core Modules

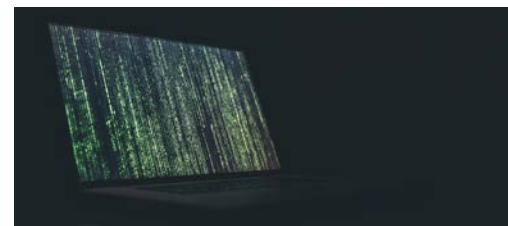

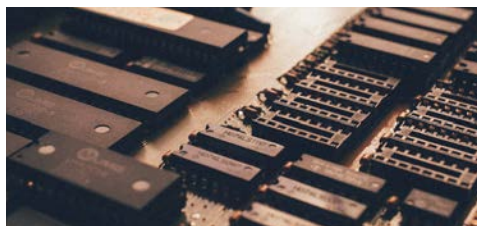

Description

Data Legislation

This module provides users an overview of relevant data legislation.

Handlers of Personal Data

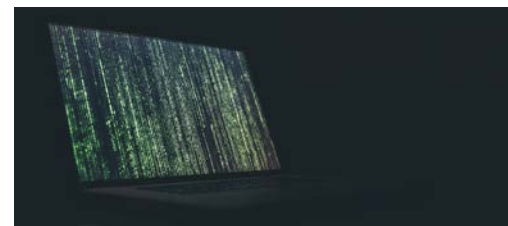

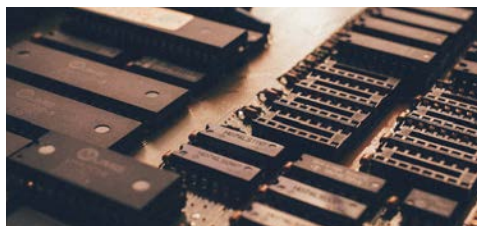

This module provides handlers of persona data additional information, case studies and tools for the protection of personal data.
